## RTFK-TRO

Our Retrofit Kit is the best solution when it comes to renewing old troffers, converting, or enacting any kind of energy saving program. This Troffer Retrofit Kit is designed to fit in most commercial fluorescent troffers easily, and provides similar or better illumination. We carry two different sizes of the kit (2'x2' and 2'x4'); both include a high-quality reflector. We also have two types of reflectors, which are composed of precision-formed aluminum, and featuring either a mirror finish or white powder coating. The kit is designed to be installed quickly and easily via four (4) self-tapping screws, which are included in the kit. The socket plate can be mounted at either the end of the troffer housing or the top of it, and features a small space for adjustment.

# RTFK-TRO

## Kit Includes
