

# FP-HB

## FP-HB

The FP-HB is a Fluorescent Low-Profile High Bay, a great solution to Metal-Halide High Bay replacements. It is also perfect for maximizing light sources. The FP-HB can hold 6 T5 lamps or 8 T5 lamps to produce a very high lumen output perfect for any open interior space. With its tool-less removable central ballast cover, maintenance can be performed without removing any lamps or reflectors, effectively saving users valuable time. Just like all Sun & Stars industrial fixtures, the FP-HB is composed of high gauge steel, power coating, and rotary lock amp-holders to ensure durability. The reflector is made of aluminum, with a reflective finish to maximize efficiency. The FP-HB is ideal for commercial spaces, storage rooms and any industrial interior space. This fixture is UL listed and ETL certified
