

IB-HB

IB-HB

The IB-HB is our I-beam Fluorescent High Bay fixture that has high focused-light output. The fixture is available with four (4) or six (6) lamps for various lighting situations. This fixture's ideal use is for warehouses, retail, or any other open interior space. The "I" shape frame is constructed with cold-roll steel and powder coating to extend the life of the fixture. Rotary-lock-amp-holders come standard, and the reflector is made from aluminum with a reflective finish for maximum efficiency. The High Bay can be ordered with motion sensors upon request to minimize unused energy. The IB-HB is UL listed and ETL certified.
