

WP-STD

WP-STD

The WP-STD is our Fluorescent Weather Fixture. This fixture is one of our most durable products, due to the housing being constructed with Polyethylene, durable plastic material, and a high impact acrylic diffuser. With its durable materials and design, the WP-STD can be used in extreme environments, including areas where moisture, dust and corrosion may be encountered. This fixture comes in two (2), three (3), and four (4) lamp options, as well as in two to eight foot frames. Not only is the body IP 65 rated, it features high light out-put ballast to maximum the efficiency. The WP-STD is UL listed and ETL certified.
